

# MAGGLASS

Please read these instructions carefully before applying your Screen Protector

1. Choose a clean, well-lit environment with a flat level surface and remove tablet from case if applicable.

2. Clean tablet screen with provided wet alcohol pad

3. Remove moisture and any remaining dust with provided dry microfiber cloth.

4. Remove any remaining dust particles using the provided dust removal sticker

5. Attached provided application tabs to front of screen protector by removing adhesive back from application tabs and placing one at the top and the other at the bottom of the screen protector

6. Remove the tempered glass screen protector from the protective film or plastic board.

7. While holding the application tabs, carefully align screen protector with the top, sides and bottom of your tablet and lower the uncovered adhesive side onto your screen

8. Gently remove application tabs from screen protector

9. Remove any bubbles by gently pushing outward from the center of the screen towards the edges using the microfiber cloth.

**Please Note.** After installing, you may see faint wave patterns or micro-bubbles. This is quite common and is caused by the bonding process. This will dissipate after 48 hours.

**What do you think?** Please take a minute to tell us at [magglasspro.com/ithink](http://magglasspro.com/ithink)
